BOOSTER FAN ACTIVATION METHODS

Current Sensor (DVK100B-C Kit)

This is the preferred method for activating a dryer booster fan. When a clothes dryer is operating and drawing at least one amp of current, the current sensor automatically activates the DVK100B dryer booster fan.

Pressure Switch (DVK100B-P Kit)

The pressure switch is designed to be mounted in the duct between the fan and the dryer. When it senses dryer airflow, the switch activates the DVK100B dryer booster fan.

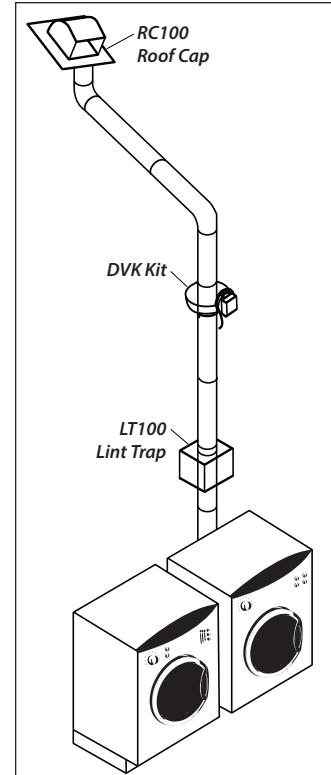

Pressure Switch - Mounted (DVK100B-PM Kit)

The pre-mounted pressure switch simplifies installation. Utilizing the components found in the DVK100B-P kit, the pressure switch is pre-wired and factory mounted to the DVK100B dryer booster fan.

Each of the above booster fan activation methods may be purchased as a separate accessory item.
Note: Continental Fan does not recommend wiring a dryer booster fan directly into a clothes dryer.

INSTALLATION TIPS

- DVK100B fans should be mounted at least 15 linear feet from dryer.
- Each 90-degree elbow is equivalent to 5 linear feet of duct.
- DVK100B fans are designed to vent up to 110 feet of 4-inch rigid duct.

HELPFUL HINTS

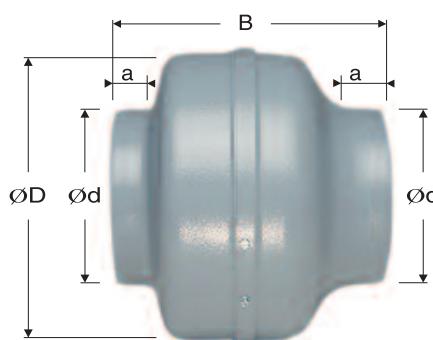

A LT100 Lint Trap may be installed between the dryer and the booster fan to reduce lint build-up and maintenance on the fan.

ENERGY RECOVERY VENTILATORS

OPERATION MODES

Natural Airflow

- Shutter is open; fan does not run.
- Air flows freely through ventilator and is purified by filters.

Supply Mode

- Ventilator continuously draws in fresh air from outside.
- Air is purified by the filters.

Ventilation Mode

- Ventilator operates in permanent supply or extract mode.
- Synchronized units can provide balanced ventilation.

Regeneration Mode

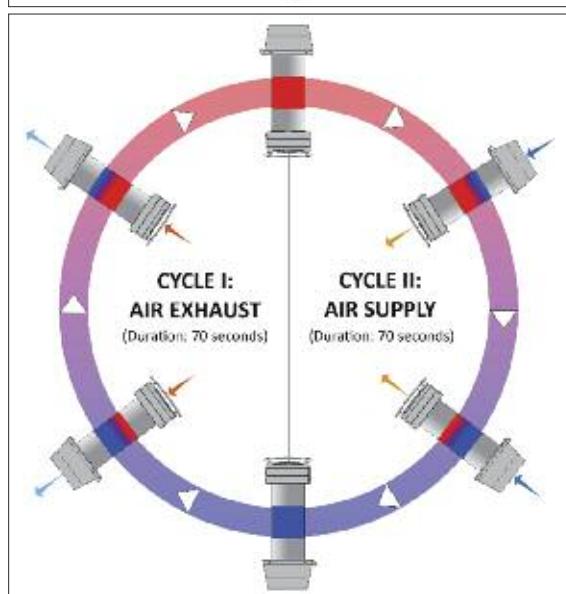

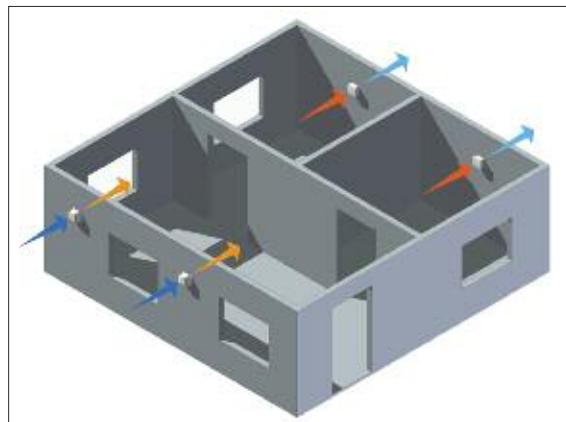

- Ventilator alternates between supply and exhaust every 70 seconds.
- Thermal energy is recovered, and the humidity setting is maintained.

Cycle I

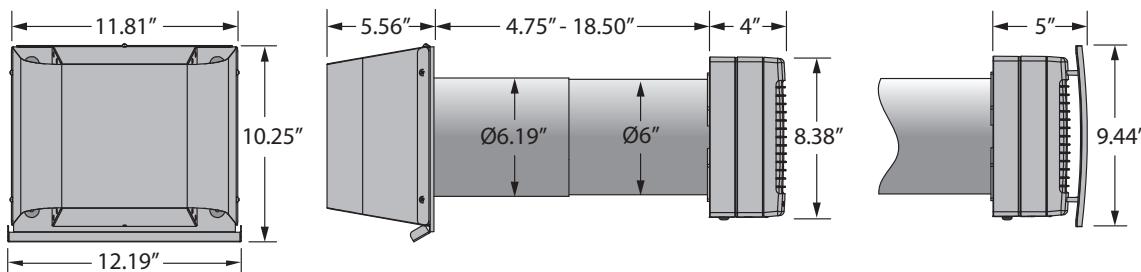

Warm stale air is extracted from the room. It heats and moisturizes the ERV core, transferring up to 90% of thermal energy. In 70 seconds, the ventilator switches to supply mode.

Cycle II

Fresh outside air flows through the ventilator, absorbing the accumulated moisture and thermal energy in the ERV core and supplying warmed air into the room. In 70 seconds, the ventilator switches back to extraction mode.

- Reduce asthma, hay fever & sinus problems
- Cut dust & cleaning requirements
- Promote health & wellness
- Ease breathing problems
- Control pet odors & dander
- Relieve sore throats, runny noses & sneezing

Photo-Catalytic Oxidation

CX Air Purifiers incorporate patented Photo-Catalytic Oxidation technology, using UVC light to activate a highly reactive catalyst. This process converts harmful and toxic compounds into benign constituents, such as water and carbon dioxide.

Easy Maintenance

CX Air Purifiers are designed for easy maintenance to ensure peak performance at all times. Built-in electronic service lights indicate when filters and UVC lamps require replacement.

Electronic Sensor

CX1000 Portable Air Purifiers feature an electronic sensor that constantly monitors air quality. Airflow automatically increases to compensate for periods of unusually high chemical activity or particle count. Warning lights signal the presence of toxic chemicals and fumes well before they reach dangerous levels or become detectable to the human senses.

CHALLENGES OF HEATING & COOLING

During the heating season, warm, heated air naturally rises to the ceiling posing a challenge for any building with high ceilings. For example, if a ceiling is 20 feet high, there can be a 10 to 20 degree variance in temperature from the floor to the ceiling. On average, a buildings' temperature increases between .5 and 1 degree F for each elevated foot as heat rises to the ceiling.

During the cooling season, cold air-conditioned air is often exiting through diffusers located at ceiling level. This air is met with resistance by the hot air rising from the floor level, forcing air-conditioning units to work harder, ultimately wasting energy trying to keep up with the cooling demand.

SOLUTION

Installing destratification fans near the ceiling registers helps push that heated or cooled air down to the floor level, ultimately creating a more comfortable environment inside the building. The overall effect is energy savings along with maximized efficiency of the HVAC system.

HOW DO I DETERMINE HOW MANY FANS I NEED?

Air circulation should occur once or twice per hour to maintain a healthy building environment.

Select the fan cfm based on the following ceiling height recommendations:

- 15 ft - 20 ft use 420 cfm fan or model DSF250
- 20 ft - 25 ft use 1055 cfm fan or model DSF300
- 25 ft - up use 1460 cfm fan or model DSF350

To determine the number of DSF fans for a given area, the following information is required:

- $(L \times W \times H) = \text{Size of room}$
- $\text{Size of room} / \text{cfm} / 60 = \text{Number of units}$

Example: a building is 125 ft. long, 75 ft. wide, and 20 ft. high.

- $125 \times 75 \times 20 = 187,500 \text{ cu. ft.}$
- $187,500 \text{ cu. ft.} / 1055 \text{ cfm (DSF300 Fan)} / 60 = 3 \text{ DSF Fans (round to the nearest whole number)}$

DFC DIGITAL FAN CONTROL

Indoor Air Quality (IAQ) has become an important part of our everyday lives. IAQ affects us in the workplace, schools and more significantly, in our homes. The American Society of Heating, Refrigeration and Air-Conditioning Engineers publishes ASHRAE 62.2, a standard that defines the minimum ventilation requirement and acceptable indoor air quality in low-rise residential buildings.

The DFC Digital Fan Control uses smart technology to address the requirements of ASHRAE 62.2, and it is capable of automatically calculating the airflow required to achieve acceptable indoor air quality. It is designed to provide increased ventilation control that is efficient and affordable. Its unique architecture offers a choice of five distinct modes of operation, allowing the control to be programmed to suit a user's preference and lifestyle. When combined with an AXC In-Line Duct Fan, the DFC Digital Fan Control provides an excellent way of meeting IAQ standards.

FEATURES & BENEFITS

- Easy to install
- Simple to program
- Convenient display with backlight
- User friendly icons
- Easy to read digital clock
- Automatic Daylight Savings Time function
- ASHRAE 62.2 ventilation standard
- Promotes proper Indoor Air Quality (IAQ)
- Ideal for home & bathroom ventilation
- Available in white or ivory
- Designed for single-speed fan operation
- Five year warranty

MODES OF OPERATION

The DFC Digital Fan Control allows the user to choose from five modes of operation:

1. Ventilation Mode

The Ventilation Mode is designed to achieve ASHRAE 62.2 acceptable indoor air quality. In this mode, the fan control operates on a 60-minute cycle, automatically determining the percentage of run time based on floor space, number of rooms and fan capacity. For example, if the fan is On for 15 minutes, it will be Off for 45 minutes.

2. Customized Cycle Mode

The Customized Cycle Mode allows the user to set the On and Off periods for the fan. Once selected, the control will cycle the fan automatically based on the user's preference.

3. Daily On/Off Mode

The Daily On/Off Mode allows the user to program the fan to turn On and Off once a day, at user-defined times.

4. Manual Mode

In the Manual Mode, the control operates the fan like a regular on/off switch. Simply pressing the main button turns the fan On or Off.

5. Countdown Mode

The Countdown Mode allows the fan to operate for any period between 10 and 60 minutes. At the end of the countdown period, fan operation will return to its prior programmed mode.
