

Misting Systems

When air exchange and fan recirculation are not enough to cool your environment, consider a J&D Manufacturing misting system. Mist kits are available as poly rings or stainless-steel crosses with 4 or 6 nozzles. The rigid construction of the stainless-steel mist kits keeps nozzles perpendicular to the airflow for a consistent mist pattern. All models come completely assembled with nozzles, hose, and female hose connector. Mist kits can be easily attached to any recirculation fan guard with cable ties.

With low pressure misting, the area surrounding the fan must remain clear in order to provide ample time for the water droplets to evaporate so they do not reform on a solid surface. Whenever you inject moisture into a closed building, you must have a proper air exchange strategy. Contact J&D Manufacturing today to help design an effective cooling system.
